## Description of the Business

To create an intensive apple orchard systems in the Guba-Xhachmas region of the Republic of Azerbaijan, in order to serve demand for apples in key target export markets of Russia, Kazakhstan and the UAE.

Major demographic, economic, social and cultural factors in target markets

Russia is the largest importer of apples in the world Despite the economic crisis, devaluation of the ruble, and negative income growth, the import of apples in 2014 were over 1 million tonnes, worth US\$620 Million.

Fruit remains popular with Russian consumers, but they are buying less exotic fruits and pears. Consumers are spending their food budgets on more affordable and necessary products. As a result, fruit imports from Europe and the Southern Hemisphere are declining, while imports from the Commonwealth of Independent States (CIS) are increasing. Domestic fruit production is limited.

Demand for Apples in the UAE is increasing, and has been met by imports. In 2014, US\$292 Million of Apples and Pears were imported.

Major Players

In Russia, the main apple producers are in Krasnodarskiy Kray, Linetskaya, and Volgogradskaya Oblast. They are developing new orchards according to new "intensive garden" technology, but at a low replacement rate of $2 \%$ compared to the world average of $10 \%$.

In the UAE, demand is met exlcusively by imports.

## Trends in the Industry

Consumer habits are changing. The consumers in Russia and Kazakhstan have are looking for lower price apples. Production of apples in the key market of Russia is low, and insufficient to meet domestic demand. The Russian

## INTENSIVE APPLE ORCHARDS

apple industry is largely outdated and inefficient,due to a lack of affordable credit for operating costs, and the absence of storage facilities and packing technology.

In the UAE, the market for apples has been met by imports from France and Italy. But the reduction in the growth of the UAE, has encouraged distributors to look for apples with lower transportation costs, in the region.

## Government Regulation

The Russian Federation only allows apples to enter the country with permission from the Veterinary and Phytosanitary Surveillance Service (VPSS) in the form of an import permit.

Importers apply to VPSS for this permit prior to the shipment and it is not uncommon for it to take more than a month to be processed;. The Apples must be accompanied by a sanitary-epidemiological certificate issued by the Federal Service for Consumer Rights and Human Well-Being.

## THE MARKET

## Market Segment

In Russia, Kazakhstan and the UAE, the target consumer is the Urban Consumer. Rural consumer tend to eat locally grown apples. The main centres for demand are Moscow, St Petersburg, Kazan (Russia), Astana and Almaty( Kazakhstan), and Dubai and Abu Dhabi ( UAE).

## Pricing and Distribution

Russian consumers prefer to buy fruits at markets rather than in retail stores because they believe the prices are lower and the product is fresher. In Russia, 65 percent of all fruit is sold through wholesale markets

## Market Trends

Urban cosumers in Russia, Kazakhstan and UAE are seeking healthier lifestyles and new products. Diets are changing as consumers choose more fresh and dried fruit as a substitute for other snacks.

The Russian Government has launched an advertising and education campaign to discourage drinking alcohol, smoking, and overeating. The number of people quitting smoking, beginning exercise and eating healthier foods is rising.

## THE COMPETITION

## Competitors and type of Competition

The import of premium apples from France, Italy and Belgium into Russia has declined, as the Russian consumer has become more price sensitive. This supply has been replaced by produce grown in the CIS countries of Azerbaijan, Uzbekistan, Moldova, Ukraine, Tajikistan, and Kyrgyzstan. These are popular with Russian consumers due to historic distribution channels that date back to Soviet times when these were the only sources of fruits for Russians.

In the UAE, the main competitors are Italian and French apples.

## Competitive Advantage

Azerbaijani Apples have the advantage of being well known to the Russian consumer, since the Soviet times. Their high content of the mineral, iron, is considered to give health benefits. Moreover, since the devaluation of the Manat, they are more price competitive.

In the UAE, Azerbaijani Apples have the advantage of being closer than French and Italian competitors, and should be fresher and at lower cost.

Section 2

## Customers (Target Distributors)

Potential Russian Distributors.

- X5 Retail Company
- Auchan
- Magnat
- Metro Group Russia
- Lenta
- Kopeyka
- O'Key
- Dixie
- Sedmoy Continent
- Victoria, GC

Potential UAE Distributors

- Floral Fruit LLC
- Kibsons International
- Al Bakrawe

## Promotion

As we intend to promote the Apples through an well known distribution networks. We will appoint an Agent in market, to identfy suitable retails outlets for the apples. This will focus on the health benefits of azerbaijani apples. For example, the content of Iron in the apples.

## Pricing

Since devaluation, the pricing of azerbaijani apples has become more competitive. In Russia, a kilo of Apples from France and Italy cost about US\$ 5, compared to about US\$2 from Moldova. The Azerbaijani apples would retail to the consumer, between these prices.
